About this manual

ARHOCH Licenses publishes legal documents and provides a reader for IAM, Todo, SGA and TV. This guide explains finding, reading, sharing and checking texts without interpreting contracts or recording acceptance.

The current portal and legal documents are in Portuguese. Translations of this manual do not translate or replace legal content. Screenshots show the real reader locally with the versioned catalog.

Quick start

1. Open licenses.arhoch.com and choose an application.
2. Choose a document, check version/effectiveness and read its text.
3. Use history for prior revisions and share an exact-version link.
4. Remember reading does not record acceptance; follow the application's specific flow.

1 Consult documents

1.1 Open the catalog and choose an application

What it is for Find the documents applicable to the product you use.

Where to find it <https://licenses.arhoch.com/>

Step by step

1. Open ARHOCH Licenses. The home page presents IAM, Todo, SGA and TV. Select the product card or Ver termos e licenças (View terms and licenses).
2. On the product page, check the name and description before choosing a document. Use Trocar aplicação (Switch application) or Aplicações (Applications) to return and choose another product.
3. On the home page, Documentos por aplicação (Documents by application) also lets you expand each product and open an explicit version or Ler em Markdown (Read as Markdown).

Expected result

Listed documents apply to the selected application. Feeds, an internal service, is outside this legal catalog.

Real Portuguese portal with the local document catalog. No account is required.

1.2 Understand the document menu

What it is for Distinguish contractual conditions, notices, specific choices and add-ons.

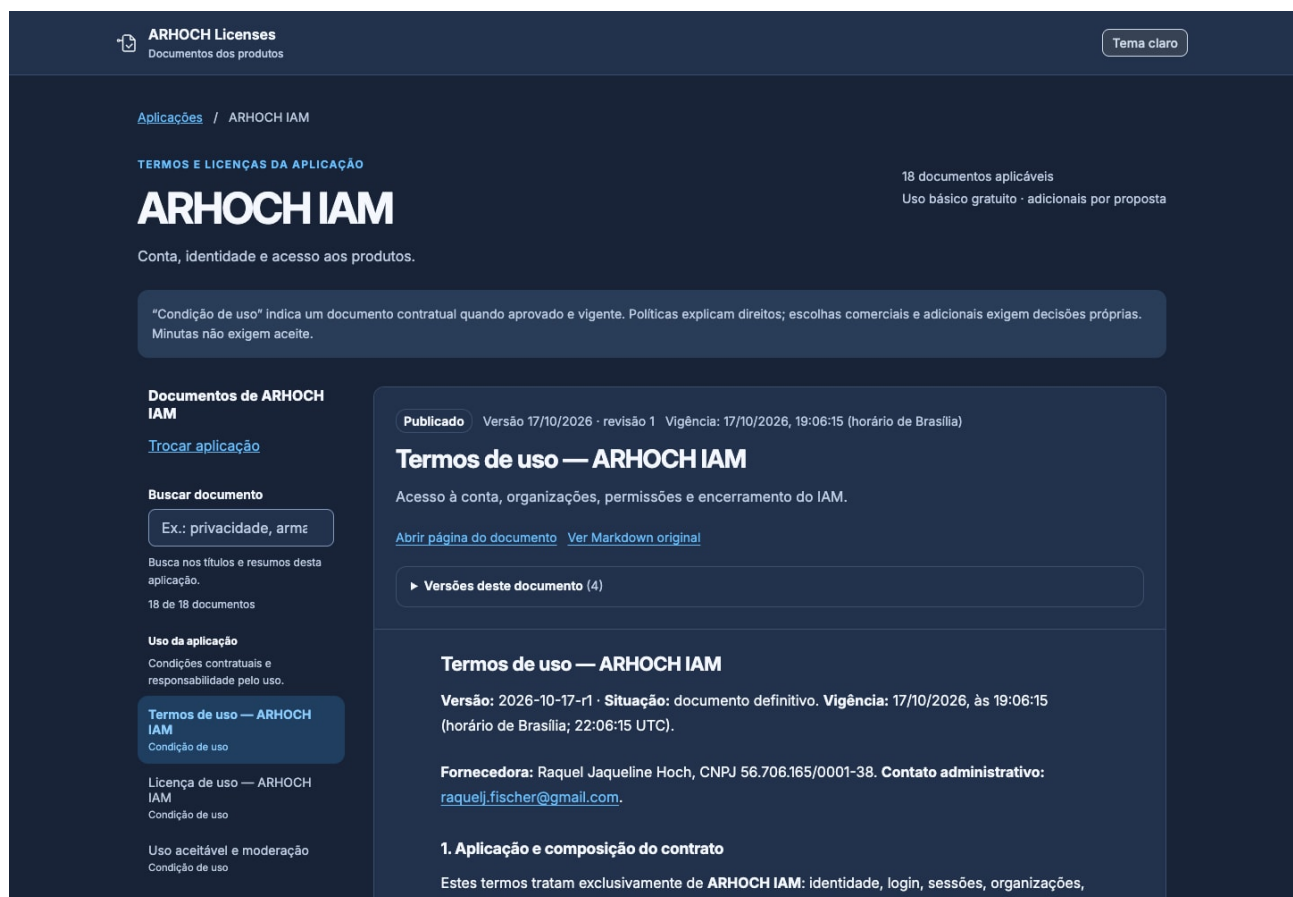

Where to find it Application page → Documents menu

Step by step

1. Choose a topic in the side menu. Groups organize use, privacy and commercial options. The right-hand reader shows the selected document.
2. Read the applicability label. A condition of use indicates a contract when approved and effective; policies explain rights; commercial choices and add-ons require separate decisions.
3. Check whether the document is specific to IAM, Todo, SGA or TV. Terms, license, privacy and commercial matrix have product-specific texts; other documents may share applicability.

Expected result

Selection changes the displayed text without recording acceptance or purchase.

Application page with navigation and reader; real Portuguese dark theme.

1.3 Search titles and summaries

What it is for Find a topic among documents for the selected application.

Where to find it Application page → Buscar documento (Search document)

Step by step

1. In Buscar documento, enter a topic such as privacidade or armazenamento. Search ignores accent differences.
2. Check the result count and displayed titles/summaries. Search filters only this application's titles and summaries; it does not search full document text.
3. Open a result from the menu. If none match, try another term or choose Limpar busca (Clear search) to restore all documents. Switching applications resets the filter.

Expected result

Search helps navigation; it does not alter text or provide legal interpretation.

1.4 Check version, status and effective date

What it is for Know exactly which text is being consulted.

Where to find it Reader header

Step by step

1. Check Publicado (Published) or Minuta · não vigente (Draft · not effective), Version and, when provided, Effective date in the header. Same-day revisions appear as revision 1, 2 and so on.
2. Read the title, summary and complete document. Timed effectiveness is displayed in Brasília time; a newer draft does not become effective merely because it is newer.
3. The catalog reference follows effective-date and status rules. If you open an explicit historical version, the reader preserves that choice and warns when it is not the reference.

Expected result

Version and status remain explicit without silently substituting the requested text.

Important information

In the editorial baseline checked on 22 October 2026, the catalog contains 33 published documents and 82 historical drafts, totaling 115 versions. This is not evidence of individual acceptance.

1.5 Review history and share a version

What it is for Compare references and provide a link identifying the exact text.

Where to find it Reader → Versões deste documento (Versions of this document)

Step by step

1. Expand Versões deste documento. Entries appear newest first with status and date.

2. Select the desired version. Check the header date and the not-catalog-reference warning when applicable.
3. Use Consultar versão de referência (View reference version) to return to the catalog-selected text. A nonexistent version shows an error; the reader does not silently replace it.
4. To share the exact text, use Abrir página do documento (Open document page) and copy the address including product, document and version, for example `#/tv/termos/2026-10-17-r1`. Keep the part after `#`.

Expected result

The link continues to identify the chosen revision even when the catalog selects a different reference.

Version selector in the real Portuguese interface.

1.6 Open original Markdown and follow references

What it is for Consult the public source text without confusing reading with editing.

Where to find it Reader → Ver Markdown original / Abrir página do documento

Step by step

1. Select Ver Markdown original (View original Markdown) to open that version's public file. Ler em Markdown on the home page provides the same kind of source access.
2. For a complete reading page, use Abrir página do documento. Links may open in another tab.

3. Internal document links retain the appropriate application and reference. Check the header after following a link. To locate a word in the body, use the browser's find-in-page feature.

Expected result

The source is read-only. The public portal offers no administration editor, document publishing or version modification.

1.7 Print or save a browser copy

What it is for Create a reading copy using the browser while preserving the version reference.

Where to find it Public document page → browser menu → Print

Step by step

1. Use Abrir página do documento to open the public page outside an embedded dialog. Choose the exact version and check title, version and effective date.
2. Use Print in the browser menu, Ctrl+P on Windows/Linux or Command+P on macOS. Wait for preview and check all pages, tables and page breaks.
3. Choose a printer or Save as PDF when your browser offers it. Also keep the version link for later source verification.
4. Printing uses browser layout and may include navigation elements. Keep access to the original portal for accessible, updated reading.

Expected result

The copy is a browser export, not a new published version or acceptance receipt. Export was checked in local Chrome; presentation may vary in other browsers.

Important information

The portal has no dedicated PDF-export button. ARHOCH usage manuals are separate files from versioned legal documents.

1.8 Read terms inside an application

What it is for Consult the embedded reader without leaving the main flow.

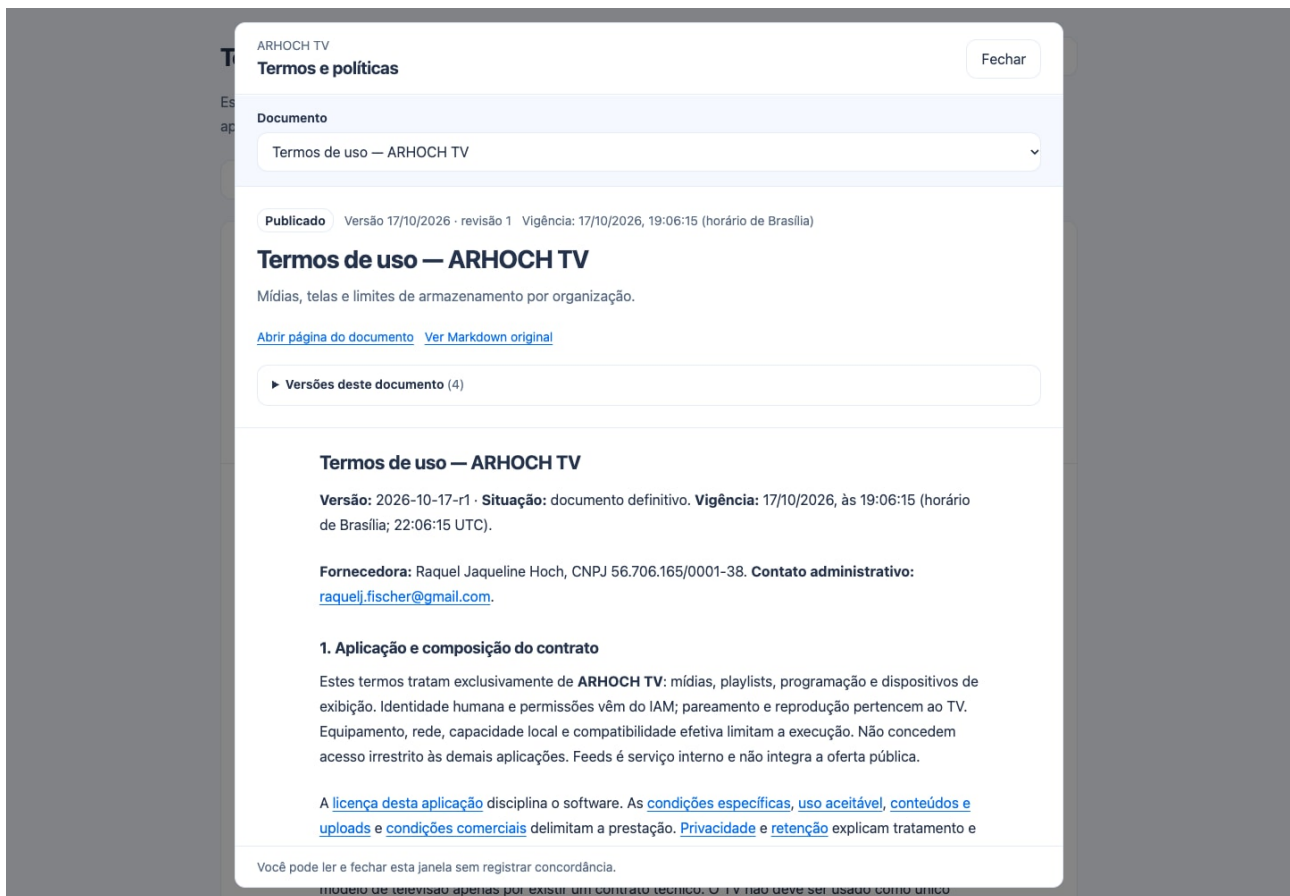

Where to find it Application with integrated reader → Termos e políticas (Terms and policies)

Step by step

1. When an application offers Termos e políticas, select it to open the dialog. The existence of the component does not mean it is integrated into every screen of every product.
2. In Documento (Document), choose a topic. Read the text, check the version and use the version history when you need an older revision.
3. Select Fechar (Close) or press Escape to return to the application. Focus returns to the opening button. Use Tab and Shift+Tab to move through dialog controls.

Expected result

Opening and closing the dialog records no acceptance. The embedded reader preserves host routing and theme.

Real Web Component dialog in the local integration example; Portuguese interface.

1.9 Read on mobile, change theme and use the keyboard

What it is for Adapt reading without altering content.

Where to find it Header and reader

Step by step

1. In the portal header, select Tema escuro (Dark theme) or Tema claro (Light theme). The embedded reader follows host presentation tokens.
2. On mobile, browse documents and text in sequence. For wide tables, scroll horizontally inside the table to read all columns.
3. Use Tab to navigate links and controls. Ir para o conteúdo (Skip to content) bypasses the header. Expand details and versions using focused controls.

Expected result

The interface keeps text readable and contains table scrolling without changing products.

Real mobile-format reader, dark theme, in Portuguese.

1.10 Resolve errors and understand reader limits

What it is for Avoid confusing consultation, acceptance and commercial consent.

Where to find it Loading/error states and footer notices

Step by step

1. If the catalog or document fails, read the message and select Tentar novamente (Try again). Check connection, application, document identifier and version in the address.
2. Application not found asks you to return to Ver aplicações (View applications). Do not silently substitute a missing version when you need that exact revision.
3. The reader verifies the integrity of received Markdown. On integrity or version failure, do not use a different text as evidence; contact the operator.
4. Acceptance is requested and recorded by applications and their backends, such as IAM registration. Licenses has no login, database or panel for accepting contracts, selling data or managing consent.

Expected result

Consulting documents grants no blanket commercial authorization and does not replace specific decisions or professional review when needed.

2 Glossary

Reference version

Text selected by the catalog according to status and effectiveness.

Draft

Text in preparation, not effective; it does not replace an effective publication.

Markdown

Public source-text file for the consulted version.

3 Help and next steps

Use Contato sobre estes documentos (Contact about these documents) in the reader footer for text questions. For product access or acceptance, contact that application's support.

ARHOCH contact: contact@arhoch.com. Do not send documents containing unnecessary personal data.
